SALESGENCY OUTREACH OS

The Sales Outreach Workflow

Six steps that turn a target market into personalized, enrolled outreach, on any stack.

Patrick Diamitani · Diamitani Industries · salesgency.com

Six steps.
Everything else is a connector, a prompt, or a tool.

Every vendor, workflow and AI agent in outbound does one of six jobs. See the jobs, and you can swap any tool without rebuilding the system.

The six steps

1 Signals

Define the ICP and why now: hiring, funding, filings, posts.

2 Companies

One deduped list from a sheet, your CRM or a webhook.

3 Contacts

Buyer personas with a verified email: web + syntax, a data tool, or your list.

4 Research

Why they might buy, in their own words, with sources. The key step.

5 Email

Your tone, the signal, the value prop. Full email or body only.

6 Outreach

Mailbox direct, or enroll in a sequence through the API.

The key move: body only

Tell the agent to write the body with **no greeting and no signature**. It drops into your sequencer as a token, so every first touch is personal and every follow-up stays consistent.

Hi {{first_name}},

{{email_1_body}}

Best,
{{signature}}

Two paths for every step

Step	Connector path (paid)	Open-source / scripting path (free)
Signals	Common Room, Clay, intent data	News RSS, job boards, SEC EDGAR
Companies	Clay, Apollo, ZoomInfo, your CRM	Google Sheet, Supabase, open registries
Contacts	Clay waterfall, Apollo, Hunter + verifier	Email patterns + MX check + Reacher
Research	Perplexity, Exa, Firecrawl, Claygent	Jina Reader, Crawl4AI, filings, RSS
Email	Claude or GPT via AI Gateway, Lavender	Ollama local models + the kit's linter
Outreach	Instantly, Smartlead, HubSpot, Outreach	n8n Gmail node, Nodemailer, Mautic

Three ways to own it

Skills

Seven skills, one per step plus an orchestrator, for Claude, ChatGPT, Grok, OpenClaw, Hermes, Codex and Cursor.

Run it in your assistant

Templates

Seven n8n workflows and seven Make blueprints. Any LLM, any data tool, free defaults, a setup prompt for each.

Run it on your stack

Hosted agent

Chat with an agent that researches, writes, deploys workflows into your n8n, runs daily and reports on a dashboard.

Have it run for you

~30s

from a website to a ready-to-send email

Value on the first touch

The free Outreach Teardown: enter your site and who you sell to. Get your ICP, five buying signals, a research angle and an email. No signup.

It is the front door to every paid tier.

The product ladder

Offer	Price	What you get
Free Outreach Teardown	$0	ICP, signals, research angle, ready email
Skill & Plugin Pack	$49 once	7 skills for every major assistant
Template Kit	$149 once	7 n8n + 7 Make templates, setup prompts
Complete Kit	$297 once	Everything above + playbook + tech-stack map
Agent Starter	$49/mo	250 researched prospects a month
Agent Pro	$149/mo	1,000 a month, n8n auto-build, daily runs, API
Agent Scale	$499/mo	4,000 a month, 5 workspaces, priority
Done-for-you	$1,000 to $5,000	SalesGency builds it in your stack

Why buyers choose to own it

Typical AI SDR platform

- Often $1,500 to $3,750+ a month
- Logic locked inside the vendor
- Still needs your data tools
- Hard to change tools or prompts

Outreach OS

- From $0, kits from $49, agent from $49/mo
- You own the workflows and prompts
- Any tool, any LLM, free defaults
- Approval on by default, nothing sends blind

Built

- Playbook and tech-stack map
- Skills for 7 assistants
- n8n templates, tested end to end
- Make blueprints and setup prompts
- Agent app on a Vercel preview
- Store listings for 3 kits, 3 plans

To go live

1. Merge the branch: kits go on sale
2. Promote the agent to production
3. Add AI Gateway credits for Sonnet
4. Test-import the Make blueprints
5. Point a domain at the agent
6. Announce the free teardown

Start with a free teardown.
