Patrick, you're invited to an interview with Loadsmart!

Claire Jolcover <claire.jolcover@loadsmart.com> Mon, Nov 9, 2026 at 12:57 PM
To: Patrick.Diamitani@gmail.com

Hi there,

I'm so excited for you to come on-site and meet the team this Thursday at 3:00 PM CST! We've enjoyed getting to know you through the process so far, and we can't wait to spend some time together in person.

Where to go
We're at 200 W. Jackson, Suite 1600. When you arrive, text my co-worker Trent at 773-520-6067 and he'll come down to grab you. No need to wander the lobby looking for us.

Who you'll be meeting

- Mu, Head of Marketing
- Prath, Head of Revenue Operations
- CC, Director of SaaS Sales (you've already met!)

What to prepare: GTM Engineer Live Case Presentation

Format: This is a 60-minute live session with CC, Mu, and Prath. You'll present for 30 minutes, then we'll spend 30 minutes on Q&A. Present the case in whatever format works best for you.

One small ask: If at all possible, could you share your study with me 24 hours before the interview? That gives the team a chance to review it ahead of time so we can make the most of our Q&A. If that's not doable, no worries at all, just bring it with you.

Context: Loadsmart sells three products (Opendock, ShipperGuide, and Loadsmart AI) into the same accounts, but to different buyers. We're increasing our outbound motion and moving it up-market.

We've built an Account Based Selling program with SDR and AE pods. Each pod works a list of 20 accounts, chosen based on the profile of our current customers plus some macro trends. Email copy creation and sending is automated through Claude and Gong. Contacts are populated into each account using ZoomInfo and Claude, so the pods don't pull contacts themselves. Our AEs and SDRs are manually responsible only for phone calls and LinkedIn messaging.

Your task: Present your point of view on how you would find, prioritize, and fix the gaps in this go-to-market motion. You'd be sitting in Chicago with the AE team, so show us how you'd work with them day to day. Please cover:

1. Diagnose. Where do you expect this program is leaking, and how would you find out? Tell us what you'd check, what a red flag looks like, and how you'd tell a symptom from a root cause.
2. List and contact quality. How would you make sure our lists and contact pulls are good now, and get better over time?
3. Signals. What signal-based systems have you built, and which would you recommend here? How would you test whether they work?
4. Measurement. How would you measure the program, and what would tell you to change strategy?
5. Working with the pods. How would you collect AE and SDR feedback, turn it into changes, and report findings to Sales, Marketing, and RevOps?
6. Tools. What would you add or change, and what ROI have you seen? Compare it against the stack we have today (Salesforce, Salesloft, Gong, ZoomInfo, Clay, Apollo, Sales Navigator, Claude).
7. Blind spots. What are we not thinking about?

A few ground rules:

- We're testing how you think through helping us build a best-in-class GTM motion and keep it dynamic, meaning it's always getting better.
- Make reasonable assumptions and state them out loud.
- Tell us what data you'd want to see before committing to recommendations. We'd love to know what you think is vital to know before building.

- Think like an owner. Tell us what you'd look for before anyone says something is broken.

We're not looking for perfect. We want to see how you think. And again, if you can send your study over 24 hours before we meet, that would be great. If any questions come up while you're preparing, just reply here and I'll get you answers fast.

See you Thursday!
